MIGUEL A. GONZALEZ ALMONTE

Senior Technical Product & AI Implementation Leader

Plano, TX | 787-367-9843 | mg.systems.dev@gmail.com | linkedin.com/in/miguel-gonzalez-8a389791 | github.com/mgsystemsdev

SUMMARY

Operations leader with 10+ years in multifamily property operations who finds expensive workflow failures, designs the product and operating model that fixes them, directs the build, and gets people to use it. Currently running make-ready operations for 2,444 units.

Designed and deployed a GPT-4o-powered operations platform (57-table PostgreSQL, four production services) proven in a live 2,444-unit residential operation with 15 daily users. I work spec-first: I define the problem, the architecture, the acceptance criteria and the tests, direct AI coding tools to implement, and own every design decision and failure analysis.

CORE CAPABILITIES

Product & Deployment: AI deployment lifecycle, requirements discovery, specification-driven development, stakeholder alignment, user training and adoption, change management, success metrics, project management

AI Implementation: GPT-4o and LLM integration, grounding and anti-hallucination design, AI governance (recommend-only), intent classification, deterministic evaluation, engine adapters (OpenAI, Anthropic, local)

Architecture: Python, FastAPI, SQLAlchemy, Alembic, Node.js, TypeScript, Next.js, React, PostgreSQL, SQLite, REST APIs, multi-tenant design, CI/CD (GitHub Actions), Railway, Git

Operations: SLA and KPI design, rules-engine design, budget management, vendor coordination, automated dispatch, Yardi, RealPage

PRODUCT CASE STUDY

Make-Ready Intelligence Platform (DMRB) | *Product I designed and built*

AI operations platform for apartment unit turns, proven in a live 2,444-unit residential operation: 15 daily users across 5 roles, 8+ months in production.

- Found the problem from 10+ years inside operations: unit-readiness knowledge was scattered across spreadsheets, verbal updates and property-system exports, with no audit trail and no gate against premature move-ins.
- Designed a 57-table PostgreSQL data model around the unit lifecycle, with append-only event history, field-level import audit trails and scoped vendor access by token.
- Turned operational judgment into a deterministic rules engine: 11 breach signals (move-in risk, SLA breach, inspection breach, stale units) evaluated in strict priority order and feeding 22 ranked action queues. It flags move-in risk up to 3 business days early.
- Deployed a GPT-4o assistant grounded in live data through one snapshot pipeline that the UI, the operations views and the AI all read. The AI recommends and never writes to business state.
- Built anti-hallucination guardrails: intent classification, role-scoped context, server-computed summaries, token budgets, rate limiting, and a deterministic fallback when the model is unavailable.
- Drove adoption across leasing, management, field and vendor users through hands-on training. The platform became the daily system of record for scheduling, vendor dispatch and SLA tracking, and supported a seven-business-day turn standard.
- Scale: four production services, 950 commits across backend and frontend, 358 test files. Now leading a multi-tenant Python/FastAPI rewrite with tenant isolation, Alembic migrations and 594 tests wired into CI.

OTHER SYSTEMS

MG-OPS, graph-first engineering knowledge system. One SQLite graph as the single source of truth for project knowledge, with one validated write path so AI tools and scripts can't record contradictory facts. 25 entity types, 31 relationship types, 12 migrations, 1,173 graph tests.

mg-agent, governed AI agent platform. Typed capabilities, approval gates, 8 engine adapters, and a replay harness that tests the platform with the model held constant, including rejection of false claims of completion. 666 passing tests in the November 2026 run.

Hers RD, collaborative SaaS product. Co-defined an RC racing product with a senior AWS engineer. I owned product definition (21 features, 10 domains, 12 API contracts), the data model and the database foundation (a merged 3,066-line schema and migrations change), and built the proof of concept. He owned the AWS infrastructure.

PROFESSIONAL EXPERIENCE

Senior Make-Ready Manager | Billingsley Company, Dallas, TX *Sep 2026 – Present*

Make-Ready Manager *Oct 2025 – Sep 2026*

- Promoted within 11 months as scope doubled from 1,244 to 2,444 units.
- Run make-ready operations end to end: turn scheduling, vendor coordination, inspections, and readiness reporting to leasing and management, working to a seven-business-day turn standard.

Service Manager | MAA, Dallas, TX *Jun 2023 – Oct 2025*

- Managed a $1M+ operating budget and $5M+ in capital projects across a 535+ unit operation.
- Took an over-budget maintenance operation to roughly $30K under budget in a single month, close to 40% of the monthly budget.
- Built Python reporting and KPI dashboards that replaced manual reports; audit pass rates improved about 30%. Trained 8 to 10 staff on the new tools.

Service Manager | RPM Living, Dallas, TX *May 2022 – Jun 2023*

- Built Excel/VBA automation that cut reporting time by roughly 70% through a redesigned data model and automated aggregation.

Residential Renovation Lead | First Choice, Dallas, TX *Jan 2021 – May 2022*

- Led scheduling, budgeting and milestone tracking for high-volume residential renovations across concurrent projects.

Earlier roles: Maintenance Technician II (American Community), Operations Assistant to Kitchen Manager (Universal Studios)

EDUCATION & CERTIFICATIONS

B.B.A., Computer Information Systems, Ana G. Méndez University (expected Dec 2027)
IBM AI Engineering Professional Certificate (in progress)
Google Project Management Certificate (2025), Python for Everybody, University of Michigan (2025)
Industry credentials: EPA 608 Universal, Certified Pool Operator
